Innovation in the Smart Campus

What extracurricular activities are available?

Where are the AEDs?

**You can find all this information
through the “NYCU Chatbot”**

The NYCU Chatbot was developed by the Center for Institutional Research and Data Analytics (CIRDA). It is dedicated to providing and pushing information about daily matters on the NYCU campus. It has accumulated more than 10,000 users, and the number of friends continues to grow.

To inform all faculty and students about the series of extracurricular activities organized by the school each semester, the CIRDA collaborated with the Office of Student Affairs to add an “Extracurricular Activities” feature in the NYCU Chatbot's recent activities section. Campus activities are categorized into eight types: co-learning, service learning, health promotion, career development, dormitory activities, indigenous activities, special events, and other activities, which all faculty and students can search for. Through this feature, we hope to increase the visibility of activities and provide faculty and students with more activity information, encouraging them to participate in these experiences.

Innovation in the Smart Campus

(2/2)

Furthermore, to enhance the NYCU Chatbot's functionality in campus safety, the NYCU Chatbot has updated the AED location information in the existing location feature. The NYCU Chatbot has added location descriptions and map navigation functions, allowing users to locate AEDs quickly, determine their shortest distance to an AED, and successfully access it when needed, collectively contributing to campus safety.
